

Token Rules

1: The assessments for this course include a midterm, a final exam, and graded assignments throughout the semester, as well as a final project.

2: Deadlines for assignments will be set based on their difficulty level.

3: To better manage deadlines and avoid repetitive extension requests, each student has been given **8 tokens** that can be used to extend deadlines.

4: Each token corresponds to **one day** of delay in submitting an assignment, without any grade deduction.

For example, if you submit an assignment 3 days late, 3 tokens will be deducted.

Any automatic grade deductions shown by Quera will not affect your real score — no need to worry.

Once a student's tokens are all used up, even a one-minute delay will result in a 0 score for that assignment.

5: The use of tokens is entirely up to you — you may use them or not at all.

6: To reward punctuality, an additional bonus (**up to +10%**) will be applied to the total assignment score that each student achieves based on how many tokens remain unused by the end of the semester.

The calculation follows a linear rule:

$$\text{Bonus} = 10 \times \left(1 - \frac{\text{Used Tokens}}{8} \right)$$

7: Tokens apply only to regular assignments, **not the final project**.

8: The final project will be announced on time, with an appropriate submission window, and no extensions will be granted. It will also include a presentation.
